

WhatIDid

Capture, structure, and share work experiences to accelerate organizational learning.

Real problems. Real actions. Real results.

The Problem

Organizations solve countless day-to-day operational problems — but rarely learn from them systematically.

But most of this knowledge does not spread consistently across the organization.

Every day employees solve problems related to:

- Project management
- Operations
- Customer service
- Internal processes

As a result:

- Teams often repeat mistakes
- Time may be spent rediscovering solutions to recurring problems
- Valuable knowledge remains fragmented

And when employees eventually leave — the knowledge leaves with them.

Why businesses fail to learn from day-to-day work experiences

Hard to Search

Free-text repositories make them difficult to search

Unstructured

Not structured around problems → actions → outcomes

Decentralized

Spread across multiple tools with no single source of truth

Employee work experiences, when recorded, are typically stored as unstructured, free text — not organized around three core elements: problem, actions, and results (what worked and what didn't).

As a result, they are difficult to search, difficult to turn into insights, and ultimately ineffective for organizational learning.

What organizations lack is not knowledge — but a structured way to learn from experience.

The Big Idea

What if companies could systematically capture and share work experiences across business areas — in real time and in a structured way?

1

Problems

The problems employees faced

2

Actions

The actions they took

3

Results

Both those that worked and those that did not

Turning everyday operational experience into organizational intelligence.

The Organizational Learning Loop

Starts by capturing work experiences as structured data for objective analysis, organized into three components: Problem, Action, and Result (what worked and what didn't).

Work Experiences = Problem → Action → Result (Worked, No Change, Got Worse)

This creates a continuous organizational learning Loop.

The Solution

WhatIDid

A platform designed to capture and structure work experiences using a simple format:

Problem → Action → Result

Each experience becomes part of a growing institutional knowledge base.

Simple format. Powerful impact.

Structured & Concise Experiences

Designed to capture individual work experiences in a short/concise, structured format — easy to consume and learn from.

Problem

What was the challenge or situation faced?

Action

What steps were taken to address it?

Result

What was the result — worked, no change, or got worse?

This makes the platform efficient and practical for day-to-day work situations.

Each experience intentionally synthesized for fast reading and immediate learning.

Who Uses WhatIDid in Organizations & How They Create Value

Employees

- Learn from others when facing a problem
- Share their own experiences after solving one

Leadership

- Identify recurring business pain points
- Understand where operational problems are concentrated
- Prioritize improvement initiatives and budgeting

How Employees Explore Experiences

When facing a problem, employees click "See What Others Did" and explore in two ways:

"See What Others Did"

1 Individual Experiences

Employees can review detailed experiences shared by colleagues:

Problem → Action → Result

Providing real examples of how others handled similar situations.

2 Key Insights – Common Cases

Highlights the most frequently shared experiences across the organization.

Summarizes patterns observed across multiple individual experiences.

Two views. One goal: learn faster from real operational experience.

Individual Experiences

In each experience, employees can review:

The problem faced by other employees

The action taken

The outcome achieved

Can filter individual experiences to quickly find relevant cases:

Work Categories (e.g., Operations, Project Management, Customer Service)

Outcomes (Worked • No Change • Got Worse)

Keywords & More (Search by keyword, rating, demographics, and other criteria)

Employees can also:

- Rate experiences

- Add comments (enrich the content with additional perspectives)

- Attach supporting files

Each experience represents a real operational situation shared by someone in the organization — helping enrich the collective knowledge base.

Key Insights – *Common Cases*

The Key Insights section highlights the most common experiences across work categories (Common Cases), based on observed market patterns, along with examples of common actions and the results they typically produce.

Worked

Actions that typically lead to positive outcomes

No Change

Actions that usually don't move the needle

Got Worse

Actions that tend to make the situation worse

Employees can also explore the individual experiences linked to each Common Case, providing deeper context and real examples.

Quickly understand which approaches succeed — and which ones to avoid.

Sharing Experiences

After solving a problem, employees click:

"Share Your Experience"

They simply record:

Problem → Action → Result

Short and concise — helping others learn from successes, mistakes, and real operational experiences.

Simple to share. Powerful to learn from.

Highlighting Top Experiences & Driving Participation

★ Top 3 Experiences

Organizations can highlight the Top 3 most relevant experiences on the platform.

Displayed at the top of the main page, giving maximum visibility to the most valuable contributions.

🏆 Incentives & Recognition

- Internal recognition programs
- Awards for valuable contributions
- Highlighting top contributors
- Incorporating contributions into performance assessments

Focus on Processes, Not People

WhatI Did focuses on processes, actions, and results — not individuals.

Capture

- Operational challenges
- Project execution
- Customer interactions
- Business processes

Do Not Capture

Discussions involving personal evaluations, interpersonal conflicts, or people management issues should not be recorded on the platform.

The objective is organizational learning — not individual evaluation.

Strategic Insights for Leadership

By analyzing recorded experiences, the platform helps identify:

Key Business Pain Points

Operational Bottlenecks

Recurring Organizational Challenges

Giving leaders a clearer view of where the business needs attention.

From operational data to strategic decisions.

A Real-Time Strategic Feedback Loop

Daily experiences captured across the organization help leadership:

1. Detect emerging problems in real time — as they occur

2. React immediately by prioritizing the right improvement efforts

3. Rapidly adapt strategies in real time to respond to operational challenges

Turning real-time operational experience into actionable strategic intelligence.

Reports & Analytics

WhatIDid provides reports that help organizations understand:

Problem Distribution

By business area

Recurring Issues

Across the organization

Trends Over Time

Patterns emerging over time

What Works

Actions that succeed or fail

- ✓ Fast escalation
- ✓ Peer reviews
- ✓ Weekly retros
- ✓ Cross-team sharing

Transforming individual experiences into actionable business insights.

Knowledge Retention

One of the biggest risks organizations face:

Knowledge walking out the door when employees leave.

WhatIDid ensures that valuable experiences are:

Recorded

Shared

Preserved

Building a lasting corporate knowledge base.

Why This Matters for the CEO

Executives care about three things:

Performance

Efficiency

Better Decisions

WhatIDid helps improve all three by turning everyday operational experience into organizational intelligence.

Leadership can:

- Identify recurring operational problems
- Accelerate learning across departments
- Prioritize improvement initiatives
- Continuously improve performance through the organizational learning loop

Turning everyday experience into competitive advantage.

Implementation Model

A simple, structured rollout in three stages

1

Setup & Alignment

(2-4 weeks)

Finalize agreement

Define pilot scope

Identify sponsor and
implementation lead ¹

Configure platform and categories ²

2

Pilot & Early Adoption

(4-6 weeks)

Train initial teams

Capture work experiences

Drive early engagement and usage

3

Expansion & Scale

(starts in 8-12 weeks · ongoing)

Roll out across teams

Generate and leverage Key Insights

Enable leadership to take faster,
data-driven strategic action

Embed into daily workflows

¹ Typically sponsored by COO/CHRO; led by Operations, L&D (Learning & Development), or Transformation teams

² For clients requiring dedicated cloud deployment (Google Cloud, AWS, or Azure), add 2-4 weeks for infrastructure setup

A fast, structured path from setup to organization-wide adoption.

Deployment Options

Organizations can implement WhatIDid in two ways:

Cloud-Based Platform

Recommended

Fastest deployment. Always up-to-date. No infrastructure required.

Available on Google Cloud, AWS, or Azure depending on client preference.

or

Internal Deployment

Via company IT infrastructure

Full data control. Ideal for regulated industries.

Flexible deployment to match your organization's needs.

Optional Professional Services

Existing internal knowledge stored in unstructured documents can be transformed into structured experiences using APIs and AI-assisted processing.

Examples include:

Internal Reports

Support Tickets

Operational Docs

Project Post-Mortems

Turn years of accumulated knowledge into structured, searchable experience.

Pricing Model

Users	Implementation Fee		Annual License
	Starter	Professional	
Up to 50 users	\$K	\$\$K	\$ / user / year
50 – 200 users	\$K	\$\$\$K	\$\$\$ / user / year
200 – 1,000 users	\$\$K	\$\$\$\$K	\$\$ / user / year
1,000 – 5,000 users	\$\$\$\$K	\$\$\$\$\$K	\$ / user / year
5,000+ users	Custom	Custom	Custom
Starter Standard setup • Default cloud • 1 training session		Professional Dedicated cloud (Google/AWS/Azure) • Data migration • Multiple training sessions	

Scalable pricing designed to grow with your organization — starting with a low-risk pilot.

Vision

Imagine an organization where every solved problem strengthens the company's collective intelligence.

Where knowledge never gets lost.

WhatIDid

Share work experiences. Accelerate organizational learning.

Real problems. Real actions. Real results.
